\*N95 Masks are also known as the *N95 respirator*, the N95 mask is a lightweight, nose-and-mouth respirator that can provide some level of protection for the wearer from viruses, including Avian and Swine flu. The N95 designation is an efficiency rating that means the mask blocks about 95 percent of particles that are 0.3 microns in size or larger (Flu viruses are usually 0.8 microns and are oftentimes attached to other debris making them larger). The Centers for Disease Control and Prevention (CDC) has recommended the use of N95 masks for protection against the Avian and Swine flu viruses.
